

PARTITION PANEL

PROCUBIX CONTRACTS

ProCubix Contracts Sdn Bhd, a subsidiary of the TSI Group, one of Malaysia's fastest growing and well-respected building products and services groups of companies, is a leading provider of the ProCubix SP36 architectural system for partitions in toilets, showers, changing rooms, swimming pools, sports facilities and leisure centres.

The SP36 cubicles, offered as either floor-mounted or overhead-braced, are engineered to provide long-term durability and structural integrity. For the past 15 years, more than 18,000 cubicles of this particular model have

been sold and installed worldwide, most of them as toilet partitions in high-traffic areas.

The door of the cubicles is self-closing or is held open in different positions up to 130° by flush fitted rise and fall hinges when the cubicle is not in use. The concealed rugged plastic latch system within the panel is maintenance-free and operated by an inside knob with an external engaged/vacant indicator. Emergency access from outside is via a special key. If an opening greater than 130° is required, the company can supply the door with a special pair of 180° hinges. The bottom edge of the panels is protected against the ingress of humidity and damage by a solid PVC end profile.

The SP36 cubicles are also suitable for the shower area. The cubicles feature a sandwich construction of steel, plastic, light metal and polyurethane, which satisfy the requirements of extreme humidity and permanent moisture in the shower area. The cubicles will also not deteriorate under hose-down or steaming conditions.

The SP36 partition panels are produced using CFC-free polyurethane, which avoids formation of condensation and voids between the exterior shell, the inner space and the filling.
